Divisions

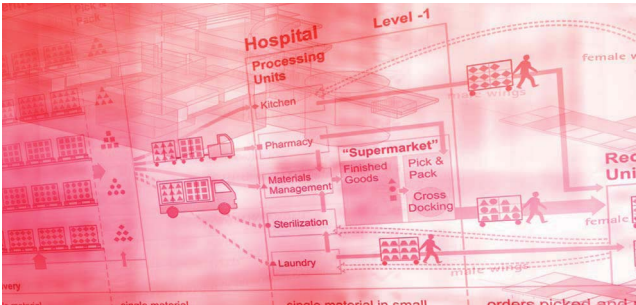

HWP Tripoli

Profile: Divisions and Assignments

Architecture and Engineering

As architects it is our task to bring together the elements of design, function and technology of a building to produce a harmonious, properly functioning whole, while naturally complying with the time and cost framework.

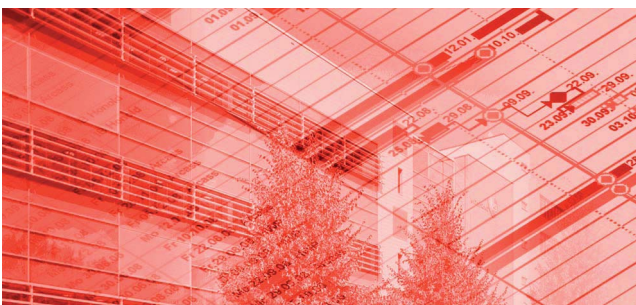

Management Consultancy and Operational Planning

Operating procedures, buildings and equipment, human resources, logistical issues, optimisation of organisation and processes – all these factors have a major impact on the quality of an institution or a company

Medical and Laboratory Engineering

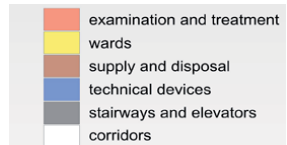

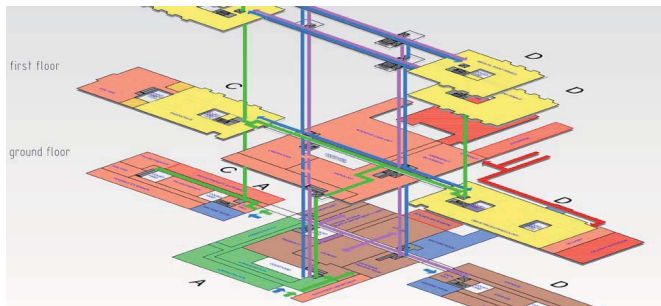

The planning of medical and laboratory equipment involves more than "just" fitting out rooms with furniture and medical devices. Here, it is a question of ensuring the best possible use of the resources available for medical and scientific work.

Project Management

The efficient management of interfaces, coordination and control face HWP with further challenges, but our skills in project planning benefit clients here as well. Ultimately we are aiming to dovetail the services of all consultants and contractors involved in construction to optimum effect so we can deliver a successful overall result.
